Discovery Metals Limited

Boseto Ball Mill Recomences

Discovery Metals reports the milling of ore at the Boseto copper project in Botswana recommenced on 8 January. The temporary interruption was caused by failure of a bearing in the ball mill gearbox. This has now been repaired and milling of the 45,000 tonne crushed ore stockpile and further un-crushed ore stocks has commenced.

Further details will be provided in the December Boseto Commissioning Update which will be published next week.

Discovery Metals Background

Discovery Metals is an ASX/BSE listed copper exploration and production company focused on the emerging Kalahari Copperbelt in north-west Botswana. The Company is a copper producer at its 100% owned Boseto Copper Project.

The Kalahari Copperbelt sediment-hosted mineralisation of the Boseto Copper Project is similar in style to the well-known and large deposits of the Central African Copperbelt of Zambia and the Democratic Republic of the Congo.

Discovery Metals has prospecting licences covering 11,872 km² along the Kalahari Copperbelt.

Further information on the Company including Mineral Resources and Ore Reserves is available on our website: www.discoverymetals.com
