ABOUT AVIVA
Aviva is an integrated energy company listed on the Australian Stock Exchange (ASX:AVA) and the Botswana Stock Exchange with its head office in Perth. The company is growing a portfolio of integrated energy assets. Aviva’s most advanced asset is the Coolimba Power project in Western Australia.

Mmamantswe Power is a 1,000MW base load power development north of Gabarone in Botswana. The project is located on the South African border and within the SAPP transmission grid. It is close to major industrial loads in South Africa. The project has the advantage of low cost fuel, low sulphur emissions, ample water resources, nearby infrastructure and a highly rated investment destination in Botswana.

Coolimba Power is a 400MW base load power project in the Midwest region of Western Australia. It conveniently located in the northern half of the SWIS power grid to take advantage of demand growth both in the SWIS and from new resource projects in the Mid West Region. The location has the advantage of low cost fuel, available water, adjacent infrastructure, existing mining lease and freehold land. Coolimba has been short listed by the state retailer in its 2009 power procurement process.
