SYNERGY SUPPLY PROCUREMENT 2009

Integrated energy developer Aviva Corporation Limited (ASX:AVA, BSE:AVIVA) is pleased to announce that its joint development proposal with global power company AES Corporation for the Coolimba Power Station Project has been shortlisted by WA Government owned retailer, Synergy in the 2009 Supply Procurement tender process for its future electricity needs.

Aviva and AES are jointly developing the 400MW Coolimba Power Station Project near Eneabba in the State’s Mid West and today’s announcement marks a major milestone in its commercial development.

Aviva Corporation CEO, Lindsay Reed congratulated Synergy on its initiative in running the 2009 procurement process with the aim of securing Western Australia’s energy future.

“This forward looking process enables Aviva and AES to plan with certainty the development of the Coolimba Power Project to meet Synergy’s and the State’s power needs”, Mr Reed said.

“The Coolimba Power Project is strategically positioned in the fast growing Mid West region which has enormous potential for economic development based on its vast mineral resources.”

“Coolimba also offers fuel and geographic diversity which is essential for the State in ensuring secure future energy supplies”, Mr Reed said.

“But one of the main attractions of the Coolimba Project is the opportunity it offers to become the State’s first carbon capture ready power station, enabling it to operate in the future as an almost zero emission power generator”.

ABOUT AVIVA
Aviva is an integrated energy company listed on the Australian Stock Exchange and the Botswana Stock Exchange with its head office in Perth. The company is growing a portfolio of integrated energy assets. Aviva's most advanced asset is the Coolimba Power project in Western Australia.

Coolimba Power is a 400MW base load power station in the Mid West. The project is conveniently located in the northern half of the SWIS power grid to take advantage of demand growth both in the SWIS and from new resource projects in the Mid West Region. The location has the advantage of low cost fuel, available water, adjacent infrastructure, existing mining lease and freehold land.

Aviva is earning a 90% interest in the Mmamantswe Coal project in Botswana where it has delineated a 1.3 billion tonne indicated resource. The project is well positioned, being on the South African border and adjacent to key infrastructure including, highway, railway, and high voltage transmission lines. Aviva is proposing a 1,000MW power station for Mmamantswe.
